Generic Harmonized System (GHS) to Canada

Canada has a tariff classification process for qualified postal and courier imports. The system may be used in lieu of a more detailed classification. This a great benefit for e-commerce imports.

This gives the option to apply one of three generic Most-Favoured-Nation (MFN) tariff rates. Assessment on “special classification provisions” found in Chapter 98 of Canada’s Customs Tariff.

GHS Tariff Structure		
Tariff Item	MFN Tariff	Preferential Tariff Treatment
9825.10.00	20%	e.g. UST/MT/ CT - Free
9825.20.00	8%	e.g. UST/MT/ CT - Free
9825.30.00	0%	e.g. UST/MT/ CT - Free

Valuation / Value For Duty

Transaction Value

In the majority of the cases, the correct value to declare at export and import is the “transaction value.” The transaction value is the price paid - or payable - for the goods.

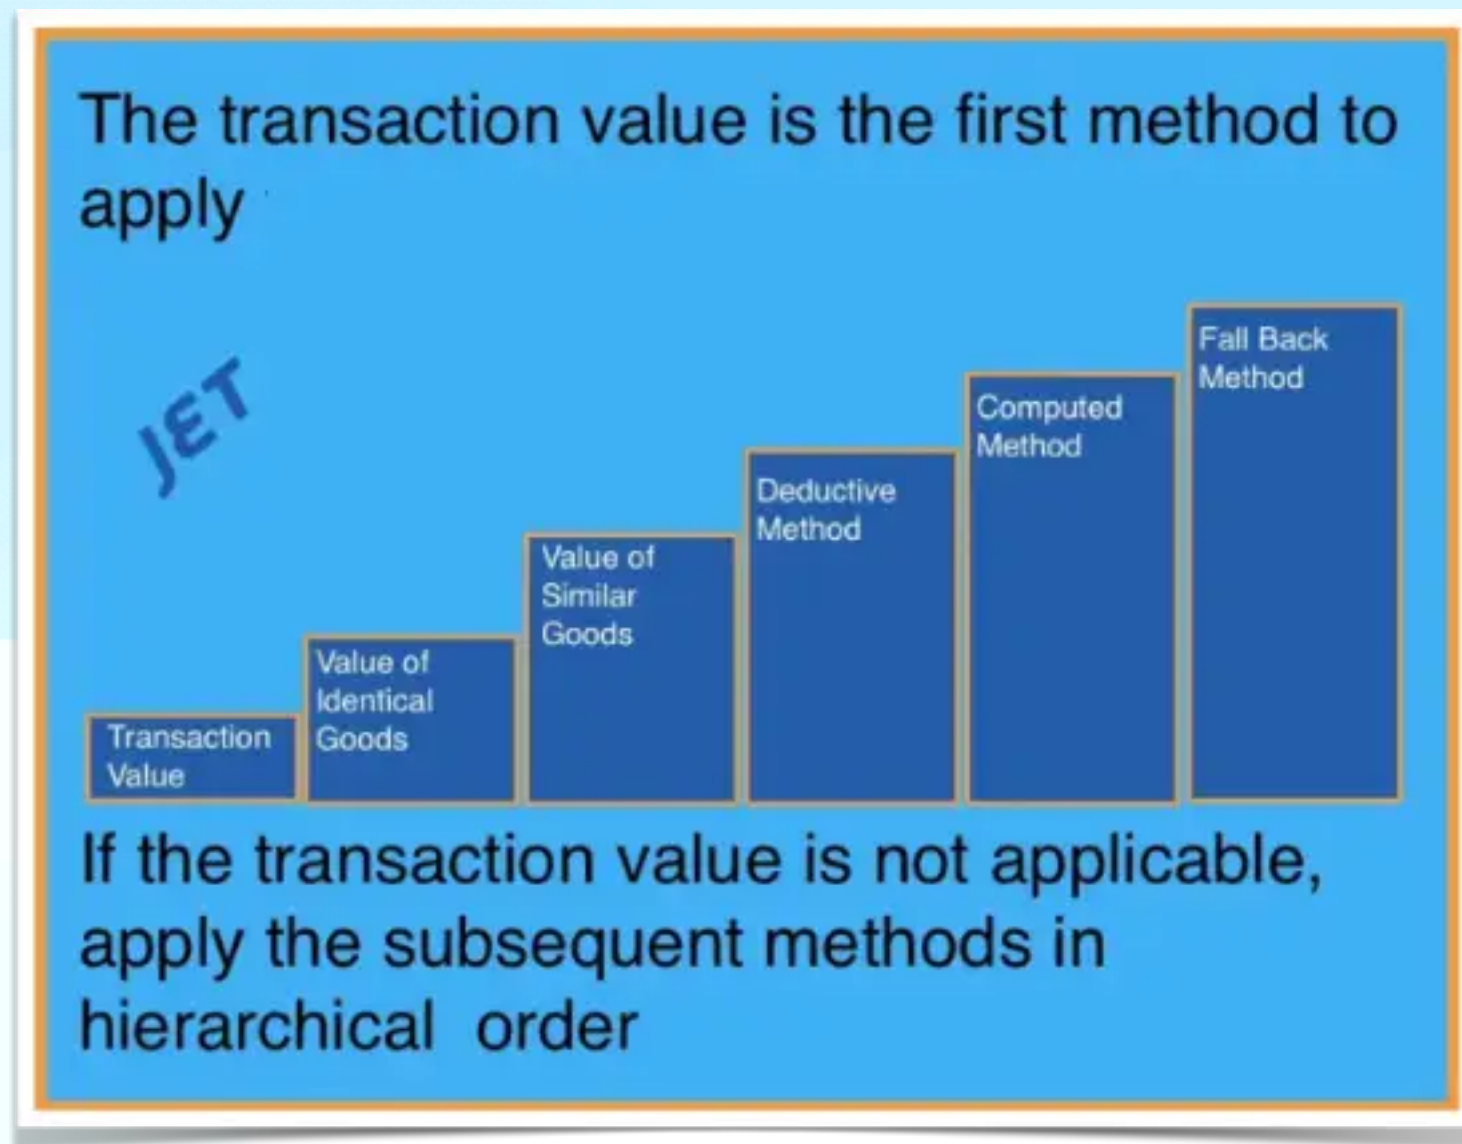

The cost of shipping and insurance is included as part of the transaction value (known as CIF value).

Canada's Import Tariffs / Duty

Import Duty is primarily determined by three main factors

- HS Code / tariff classification
 - Country of Origin
- = % Duty

$\% \text{ Duty} \times \text{Value} = \text{Resulting Duty Assessment}$

* Note that duty is sometimes based on volume, weight or other measurements rather than value

Non-Resident Importer/ NRI

The NRI program allows Vietnam businesses to get a Canadian Business Number (BN). This is the most common way for foreign companies to import goods to Canada.

This program allows Vietnam companies to effectively operate as a Canadian company. It can simplify the import process. Large bulk imports can import via one customs entry for de-consolidation and distribution to multiple consignees.

The requirements include record keeping, posting of a surety bond to benefit from customs release prior to payment of import fees, and reporting.

Note: Different methods of valuation/ “value for duty” may apply
